My Mobile and Web Architect experience spans many years that include manufacturing, education, field service, and DSD (Direct Store Delivery). The technologies have also spanned platforms and languages with the Microsoft Technology Stack being the main focus of my career. With all transitions through many technology phases, my goal has always been to support the current platforms that service the companies I have worked for. Additionally, there has also been an emphasis on what future possibilities exist for my skill set in the technology world. Nevertheless, my goal has always been to be prepared for what is happening, and what is possible while serving with the best customer support I can provide.

As I mentioned, there have been many technology phases that I have experienced and worked through in my career. These phases include:

1. Developing in a manufacturing environment on a mobile platform with limited power and processing. This also included supporting desktop and database applications.
2. Education with web technologies and web design curriculums for the Community College System.
3. Mobile and web technologies that contain database, server, web and mobile components for the DSD and field service industry.

I have had been blessed with opportunities that have allowed me to excel and grow in my technical and professional career. And now, I am ready for the next phase of my career.

For the next phase of my career, I would like to take a more defined role in Leadership, and be more involved in the decision making process rather than the recommendation process. I would like to be in a place of leading a group and having a more defined voice in deciding the technologies that should be used. Furthermore, I wish to also be completely immersed in the architectural design and implementation with these technologies. Given all of the experiences and phases in my career, I have a great deal to offer both in technology and professional perspectives. I have worn many hats in my career, and the next hat I wish to wear includes more of an emphasis on making the technology decisions all the while developing, educating and leading.

Through a solid education and professional drive, I have developed a skill set that I know would be an essential asset to any company. Please review my attached resume for additional details on what I have presented here. I believe you will find that in my career, I have been able to transform and adjust to the ever-changing technology world.
